

INTRODUCTION TO MOBILE PHONE

What is a mobile phone?

A mobile phone is a wireless handheld device that allows users to make and receive calls and to send text messages, among other features over a wide distance or geographical area. The earliest generation of mobile phones could only make and receive calls. Today's mobile phones, however, are packed with many additional features, such as web browsers, games, cameras, video players, even navigational systems. The earliest generation of mobile phones could only make and receive calls. Today's mobile phones, however, are packed with many additional features, such as web browsers, games, cameras, video players, navigational systems, email and internet access, photography, money transfer, banking, and so on. A mobile phone may also be known as a cellular phone or simply a cell phone.

CLASSIFICATION OF MOBILE PHONE BASED ON TYPES

Basically, there are three types:

- i. the **basic phones**,
- ii. **feature phones**,
- iii. **smartphones**.

1. BASIC PHONE

Basic phones are also known as conventional phones used mainly for making calls and texts. These are basic devices that are strong, durable, and give a far superior battery life.

FEATURES OF BASIC PHONE

The basic phones support the following features:

1. CSTN/Monochrome screen
2. 1G network
3. Physical keyboard
4. Single Simcard
5. Sand disk/MM2 memory card
6. Infrared

FUNCTION/FEATURE OF A BASIC PHONE

1. It is used for making and receiving of calls.
2. It is used for sending of text messages.

ADVANTAGES OF A BASIC PHONE

1. They have a longer life span
2. They are very stronger and durable
3. Their battery last longer than features phones
4. They are easier to operate and handle compare to feature phones
5. They are easier to maintain/require less maintenance
6. The support only java-based language operating system.

DISADVANTAGES OF BASIC PHONE

1. They have limited or little features
2. They have lower memory capacity
3. They don't support file sharing or some support file
4. They are less expensive.

2. FEATURE PHONE

Feature phone is a term typically used as a retronym to describe a class of mobile phones. Feature phones have a fixed set of functions beyond voice calling and text messaging but are not as extensive as a smartphone. These include functions on texting, multimedia, a full web browser and GPS. Feature phones tend to use a proprietary, custom-designed software and user interface, and lack the capabilities of smartphones.

FEATURES OF A FEATURE PHONE

The feature phones support the following features:

1. Backlight LCD screen
2. Network compatibility: 2G
3. SD card slot
4. Infrared/bluetooth
5. Camera
6. Touch light
7. Audio port
8. Micro USB Charging port
9. Physical keyboard
10. More than one SIM card
11. Micro SD card
12. Wireless connection: Infrared and bluetooth

FUNCTIONS OF A FEATURE PHONES

1. They are used to make and receives calls.
2. They are used to send and receive of messages (SMS and MMS).
3. They are used to record and play audio and music.
4. They are used to browse the Internet

5. They are used to display time and date ,alarm clock, stopwatch, and timer etc
6. Access utilities, such as a flashlight, calendar, calculator etc.
7. Security features such as phone lock code/pin,

ADVANTAGES OF A FEATURE PHONES

1. They have a long life span.
2. Their battery last longer not like that of the basic phone
3. They are easy to operate and handle compare to smartphone phones
4. They require less maintenance.
5. The support web-based internet services.
6. They are cheap to purchase.

DISADVANTAGES OF SMARTPHONE PHONE

1. They have limited or little functions.
2. Their memory capacity is low
3. They don't support file sharing
4. They are less expensive to purchase

3. SMARTPHONES

Smartphones are a class of mobile phones and of multi-purpose mobile computing devices. They are distinguished from feature phones by their stronger hardware capabilities and extensive mobile operating systems, which facilitate wider software, internet (including web browsing over mobile broadband), and multimedia functionality (including music, video, cameras, and gaming), alongside core phone functions such as voice calls and text messaging. Smartphones typically include various sensors that can be leveraged by their software, such as a magnetometer, proximity sensors, barometer, gyroscope and accelerometer, and support wireless communications protocols such as Bluetooth, Wi-Fi, and satellite navigation.

The majority of smartphones have featured thin, slate-like form factors, with large, capacitive screens with support for multi-touch gestures rather than physical keyboards, and offer the ability for users to download or purchase additional applications from a centralized store, and use cloud storage and synchronization, virtual assistants, as well as mobile payment services.

FEATURES OF A SMARTPHONE

Smartphones are loaded with features and capabilities that make them more than a phone. Below is a listing of the most popular features of a smartphone.

1. Make and receive phone calls text messages.
2. Take, show, and store pictures and video.

3. Browse the Internet, as well as send and receive e-mail.
4. GPS capability for location and navigation.
5. Record and play audio and music.
6. Display time and date and other functions such as alarm clock, stopwatch, and timer.
7. Display weather and temperature information.
8. Voice dictation and take notes.
9. Virtual assistant using Siri, Google Assistant, or Cortana.
10. Access utilities, such as a flashlight, e-book reader, and calculator.
11. Security features such as finger print/thumb print, face recognition, pattern lock, pin lock, FRP lock etc.

ADVANTAGES OF A SMARTPHONE PHONES

1. They have high security features
2. They have large memory capacity
3. They support 3G and above network.
4. They support only standard/Micro SIM card.
5. Most battery are inbuilt/non removable.
6. The support application internet services.

DISADVANTAGES OF BASIC PHONE

1. They consume much internet data.
2. They are difficult to operate
3. They are fragile.
4. They are easily prone to virus attack.
5. The consume battery compares to basic and feature phones.
6. Cost of maintenance is high
7. They don't support file sharing
8. They are much expensive
9. Difficult to assemble and disassemble.

SIMILARITIES BETWEEN FEATURE PHONES AND SMARTPHONES

1. Both are portable
2. Both are used for making calls
3. Both cater third-party application development.
4. Both are used for sending SMS and MMS
5. Both have security features.
6. Both support more than one SIM.
7. Both are used to browse the Internet.
8. Both are used to record and play audio and music.

9. Both have bluetooth wireless connection.

ADVANTAGES OF USING MOBILE PHONES:

The advantages of mobile phones are given below:

1. Mobile Phone as a Source of Communications
2. Mobile Phone Save Money
3. Mobile Phone Used for Entertainment
4. Mobile Phone Save Life in an Emergency
5. Mobile Phone GPS used in Location of places
6. Internet Access Through Mobile Phones
7. Mobile phone are Small and Portable
8. Mobile phones are also used as a digital personal assistant.
9. Learning and Research Using Mobile Phones
10. Online Banking and Finance
- 11.

DISADVANTAGES OF USING MOBILE PHONES

The disadvantages and bad effects of using mobile phones on youth are given below.

1. Mobile Phones Cause Isolation
2. Mobile Phone Wastage of Time
3. Mobile Phone Distraction:
4. Wastage of Money on Mobile Phones
5. Mobile Phone Addiction
6. It causes Cyberbullying
7. Mobile Phone Security Issues
- .
8. Study loss Due to High Usage of Mobile Phones
9. Mobile Phone Cause Distance from relatives
10. Mobil Phone Cause Health Problems
- Mobile phones also caused mental disorders
1. Anxiety
2. Anger
3. Depression
4. Tension, etc.
11. Sleeping Issues
12. Mobile Phones Cause Accidents
13. Cheating on mobile Phones:
14. There are issues of sexual abuse, exploitation, and child pornography with mobile phones.
